

BUSINESS RECORDS AFFIDAVIT

STATE OF TEXAS

COUNTY OF Walker

RE: 3:12-CV-02037; Stephen McCollum, et al v. V. Livingston, et al

BEFORE ME, the undersigned authority, personally appeared Nathan Ward, who, being duly sworn by me, deposed as follows:

"My name is Nathan Ward. I am over 18 years of age, of sound mind, capable of making this affidavit, and have personal knowledge of the facts herein stated:

"I am employed as a Regional Manager with the Office of the Inspector General (OIG) – Texas Department of Criminal Justice. I am the custodian of the attached records of the OIG. These records are kept by the OIG in the regular course of business, and it was the regular course of business of the OIG for an employee or representative of the OIG, with knowledge of the act, event, condition, or opinion, recorded to make the record or to transmit information thereof to be included in such record; and the record was made at or near the time or reasonably soon thereafter. The attached record is an exact duplicate of the record on file with the Office of the Inspector General in Criminal Case File No. 2011.03006 concerning Offender Larry McCollum, TDCJ No. 01721640, as of the date of this affidavit.

Nathan Ward
Regional Manager
Office of the Inspector General

SWORN TO AND SUBSCRIBED before me on this the 14th day of December 2012.

NOTARY PUBLIC in and for
The State of Texas
Printed Name: Celia A Eastham
My commission expires: January 31, 2016

SUMMARY:

On July 22, 2011, Offender Larry McCollum, TDCJ # 1721640, was discovered by security staff of the Hutchins State Jail having seizures while in his assigned bed. McCollum was transferred by ambulance to Parkland Hospital in Dallas, Texas. McCollum was admitted to the Intensive Care Unit and treated for hyperthermia. His condition continued to worsen and on July 28, 2011, he was pronounced dead at 11:35 p.m.

INCIDENT/INVESTIGATION REPORT

CASE #: 2011.03006

INTRODUCTION:

My name is Michael Keck; I am a Criminal Investigator with the Texas Department of Criminal Justice, Office of the Inspector General, Investigations Division- Region A and I conducted this investigation.

REPORTTEE'S STATEMENT:

Lieutenant Sandra Sanders of the Hutchins State Jail called and reported that Offender Larry McCollum had died on July 28, 2011, at 11:35 p.m. at Parkland Hospital in Dallas, Texas.

CRIME SCENE DESCRIPTION:

This incident occurred at the Texas Department of Criminal Justice, Hutchins Unit, located at 1500 E. Langdon Rd., Dallas, Texas, 75241. Specifically, this incident occurred at Building C7 Dorm. This building is constructed of metal and houses inmates in a dorm style setting. There are multiple bunk beds, with top and bottom beds, constructed of metal. However, this incident concluded at Parkland Hospital's Intensive Care Unit.

INVESTIGATOR'S NARRATIVE:

On July 22, 2011, at approximately 3:00 a.m., Offender McCollum, Larry, TDCJ # 1721640, was discovered by Hutchins State Jail Security Staff in his assigned bunk having a seizure. McCollum was taken to the medical department where it was determined he should be transported to a local hospital. McCollum was transported to Parkland Hospital in Dallas, Texas, and his condition was assessed. McCollum was listed in critical condition and placed on a ventilator. McCollum was admitted to the Intensive Care Unit.

On July 28, 2011, I received a call from Lt. Sandra Sanders of the Hutchins State Jail at 11:37 p.m. She stated that Offender Larry McCollum, TDCJ # 1721640, who was at Parkland Hospital died at 11:35 p.m. this date. I responded to Parkland Hospital in Dallas and arrived at 12:32 a.m. I went to the ICU Room 911 where Correctional Officers Tashawna Bowser and Haskell Rayford identified the body of Offender McCollum to me. I examined and photographed the body and did not find any evidence of assault or trauma. I completed the Investigator's Report of Custodial Death. I made contact with Offender McCollum's daughter, and informed her I would be investigating the death of Offender McCollum. I spoke with Kristi George of the Dallas County Medical Examiner's Office who advised that they would be conducting an autopsy. Also, I spoke with Dr. Charles Owens who advised that death may have been caused by hyperthermia and he wanted an autopsy. I cleared the scene at 1:20 a.m. and escorted the body to the Parkland Hospital Morgue where it was secured until release to the Dallas County Medical Examiner.

I conducted an interview with Correctional Officer Tashawna Bowser. Bowser gave a voluntary written statement. Bowser stated that on July 28, 2011, she was assigned to maintain custody of Offender McCollum at Parkland Hospital ICU Room 911. Bowser stated that on July 28, 2011, at approximately 11:35 p.m., McCollum died. Bowser stated that she maintained care and control of McCollum's body until I arrived and she was relieved by her supervisor.

I conducted an interview with Correctional Officer Haskell Rayford. Rayford gave a voluntary written statement. Rayford stated that on July 28, 2011, he was assigned to maintain custody of Offender McCollum at Parkland Hospital ICU Room 911. Rayford stated that on July 28, 2011, at approximately 11:35 p.m., Dr.

McCullum 01457

INCIDENT/INVESTIGATION REPORT

CASE #: 2011.03006

Charles Owens pronounced McCollum dead. Rayford stated that the family of McCollum exited Room 911 at approximately 11:40 p.m. and that the scene was secured until he was relieved by his supervisor.

Medical records from Parkland Hospital indicated that McCollum arrived at the emergency room unresponsive, hypertensive with blood pressure 200/150, and he had a body temperature of 109.4 degrees Fahrenheit. McCollum was admitted to the Intensive Care Unit for six days and was treated for hyperthermia and multi-organ failure. After a very poor prognosis, his family opted to discontinue treatment, and McCollum's condition worsened until he died.

Medical records from the University of Texas Medical Branch (UTMB)/Correctional Managed Care indicate that McCollum was received from McClennan County, Texas, County Jail on July 15, 2011, with a history of hypertension. While in McClennan County Jail, McCollum was prescribed Clonidine, 0.1 milligrams, once per day. During the intake health screening at the Hutchins State Jail, the Clonidine was discontinued and McCollum was prescribed Hydrochlorothiazide, 25 milligrams, orally, once per day.

On July 22, 2011, at 8:00 a.m., an interior temperature reading of C Building was 86 degrees Fahrenheit taken by the Hutchins State Jail Risk/Safety Manager. A TDCJ temperature log recorded by security staff indicates the outside air temperature at 7:30 a.m. was 81 degrees Fahrenheit with a heat index of 84 degrees. TDCJ Security Staff records outside temperatures from 6:30 a.m. to 6:30 p.m. at the G security control building.

On July 29, 2011, Doctor Keith Pinckard of the Southwestern Institute of Forensic Sciences, Office of the Medical Examiner conducted a full autopsy examination of McCollum. I received a copy of Autopsy Report # IFS-11-10161-ME authored by Doctor Pinckard. The report indicated that McCollum died as the result of hyperthermia. The report indicated contributing factors included being in a hot environment without air conditioning, morbid obesity (McCollum's Body Mass Index = 49.5), and treatment with a diuretic, Hydrochlorothiazide, for hypertension. Doctor Pinckard listed the manner of death as an accident.

Based on the autopsy report, medical history, and medical records, the cause of death for Offender Larry McCollum was determined to be hyperthermia and the manner of death was accidental. No criminal offense occurred.

VICTIM(S):

Larry McCollum, TDCJ # 1721640, Offender, Hutchins State Jail- Deceased

SUSPECT(S):

None

WITNESSES:

1. Tashawna Bowser, Correctional Officer, Hutchins State Jail – Bowser can testify that she was at the hospital at the time of McCollum's death and maintained custody of the body until properly relieved.
2. Haskell Rayford, Correctional Officer, Hutchins State Jail – Haskell can testify that he was at the hospital at the time of McCollum's death and maintained custody of the body until properly relieved.

Case: IFS-11-10161 - ME

Decedent: McCollum, Larry Gene 58 years White Male DOB: 04/04/1953

Date of Death: 07/28/2011 (Actual)

Time of Death: 11:35 PM (Actual)

Examination Performed: 07/29/2011 09:30 AM

ORGAN WEIGHTS:

Brain: 1,600 g	Right Lung 700 g	Right Kidney: 260 g
Heart: 550 g	Left Lung: 500 g	Left Kidney: 280 g
Liver: 2,590 g	Spleen: 250 g	

EXTERNAL EXAMINATION

The body is identified by tags. Photographs and fingerprints are taken.

The body is received nude. No personal effects or jewelry are present on the body.

The body is that of a normally-developed white male which appears consistent with the recorded age of 58 years. When nude, it measures 70 inches in length and weighs 345 pounds. There is good preservation in the absence of embalming. Rigor mortis is present. Lividity is located on the posterior body surfaces and blanches with pressure. The body is room temperature in the presence of minimal refrigeration.

The hairline is receding and there is short gray hair that is cut very close to the scalp. Mustache and beard stubble are on the face. The irides are brown and there are no petechiae of the bulbar or palpebral surface of the conjunctivae. The ears, nose, and lips are unremarkable. The mouth has natural dentition. The neck is without masses or unusual mobility. The chest and back are unremarkable. The abdomen is protuberant. The extremities are symmetric. The external genitalia, perineum, and anus are unremarkable.

A 1 inch area of indentation and red discoloration is on the right side of the forehead.

IDENTIFYING MARKS AND SCARS

A 3 inch linear scar is obliquely oriented on the right side of the abdomen.

A 2 inch linear scar is on the right temporal scalp.

McCollum, Larry Gene

Page 2 of 6

- Cardiac monitor pads affixed to the chest
- Intravascular catheter in upper right arm
- Hospital band encircling left wrist
- Foley catheter
- Rectal catheter connected to a bag containing fecal material
- Needle puncture in the left inguinal region
- Needle punctures in the right inguinal region, with extravasated blood within the soft tissue and musculature surrounding the right inguinal canal

EVIDENCE OF INJURY

A 1/4 inch purple contusion is on the superior aspect of the bridge of the nose.

Reflection of the scalp reveals a 3 cm area of hemorrhage in the left temporalis muscle along the parietal bone. A 1 inch purple contusion with central abrasion is immediately inferior to the left external ear. Deep to this is a 4 cm area of hemorrhage within the underlying soft tissue.

A 2 cm purple contusion is on the left supraclavicular region. A 2 inch purple to yellow contusion is on the right upper abdomen near the subcostal margin. A few purple contusions measuring between 1 and 2 cm each are on the left side of the chest. A 1/2 inch red abrasion is on the front of the proximal left forearm. A 2 inch purple contusion is on the posterior aspect of the left thigh.

INTERNAL EXAMINATION

BODY CAVITIES: Approximately 300 cc of tan clear fluid are within each pleural cavity. The pericardial and peritoneal cavities contain no adhesions or abnormal collections of blood or other fluid.

HEAD: See EVIDENCE OF INJURY. The dura and dural sinuses are unremarkable. There are no epidural, subdural or subarachnoid hemorrhages. The leptomeninges are thin and delicate. The cerebral hemispheres are symmetrical, with flattened gyri and effaced sulci. There is mild notching of the parahippocampal gyri. The cerebellar tonsils are soft; sections reveal friable, tan-red necrotic parenchyma. The cranial nerves and blood vessels are unremarkable. Sections through the brainstem are unremarkable. Sections through the cerebral hemispheres exhibit diffuse blurring of the gray-white matter junctions. There are no hemorrhages in the deep white matter or the basal ganglia. The cerebral ventricles contain no blood. The spinal cord, as viewed from the cranial cavity, is unremarkable.

NECK: The soft tissues and prevertebral fascia are unremarkable. The hyoid bone and laryngeal cartilages are intact. The lumen of the larynx is not obstructed.

CARDIOVASCULAR SYSTEM: The intimal surface of the abdominal aorta is free of significant atherosclerosis. The aorta and its major branches and the great veins are normally distributed and unremarkable. The pulmonary arteries contain no thromboemboli. The heart is markedly enlarged, with normal contours. The pericardium, epicardium, and endocardium are smooth, glistening, and unremarkable. There are no thrombi in the atria or ventricles. The foramen ovale is closed. The coronary arterial system is free of significant atherosclerosis. The atrial and ventricular septa are intact. The cardiac valves are unremarkable. The myocardium is dark red-brown and firm, and there are no focal

abnormalities.

THINK 24 DALLAS COUNTY
 JIMMYE J. STEPHENS, M.D., FRCPC
 DIRECTOR, TEXAS INSTITUTE OF FORENSIC SCIENCES

RESPIRATORY SYSTEM: The upper airway is unobstructed. The laryngeal mucosa is smooth and unremarkable, without petechiae. The pleural surfaces are smooth and glistening. The major bronchi are unremarkable. Sectioning of the lungs discloses a dark red-blue, moderately congested parenchyma.

HEPATOBIILIARY SYSTEM: The liver is covered by a smooth, glistening capsule. The parenchyma is dark red-brown and moderately congested. The gallbladder contains approximately 10 cc of dark green bile, and one dark green cholesterol stone measuring approximately 2 inches in greatest dimension.

GASTROINTESTINAL SYSTEM: The tongue is grossly normal both externally and upon sectioning. The esophageal mucosa is gray, smooth, and unremarkable. The stomach is empty. There are no tablets or capsules. The gastric mucosa has normal rugal folds, and there are no ulcers. The small and large intestines are externally unremarkable. The appendix is absent. The pancreas is unremarkable externally and upon sectioning.

GENITOURINARY SYSTEM: The capsules of both kidneys strip with ease to reveal smooth and slightly lobulated surfaces. The cortices are of normal thickness, with well-demarcated corticomedullary junctions. The calyces, pelves, and ureters are unremarkable. The urinary bladder is empty. The mucosa is gray, smooth, and unremarkable. The prostate gland is unremarkable both externally and upon sectioning.

ENDOCRINE SYSTEM: The thyroid and adrenal glands are unremarkable externally and upon sectioning.

LYMPHORETICULAR SYSTEM: The spleen is covered by a smooth, blue-gray, intact capsule. The parenchyma is dark red. The cervical, hilar, and peritoneal lymph nodes are unremarkable.

MUSCULOSKELETAL SYSTEM: The clavicles, ribs, sternum, pelvis, and vertebral column have no fractures. The diaphragm is intact.

MICROSCOPIC EXAMINATION:

Heart: myocyte hypertrophy; increased interstitial and perivascular fibrosis.

Lung: vascular congestion.

Liver: moderate macrovesicular steatosis, mild focal centrilobular necrosis.

Kidney: No significant pathologic alteration is identified.

Spleen: diffuse hypocellularity with depletion of both the red and white pulp.

TOXICOLOGY:

Evidence Submitted:

The following items were received by the Laboratory from the Office of the Medical Examiner:

- 004: Biohazard Bag
- 004-001: Blood, femoral - gray top tube
- 004-002: Blood, femoral - gray top tube
- 004-003: Blood, femoral - gray top tube
- 004-004: Blood, femoral - gray top tube
- 004-005: Blood, femoral - red top tube
- 004-006: Vitreous - red top tube
- 004-007: Skeletal muscle - plastic tube

Blood, postmortem

Acid/Neutral Screen (GC/MS)
negative (004-001)

Alcohols/Acetone (GC)
negative (004-002)

Alkaline Quantitation (GC, GC/MS)
negative (004-001)

Opiate Narcotics (GC/MS)
0.107 mg/L morphine (004-002)

Vitreous

Alcohols/Acetone (GC)
negative (004-006)

Opiate Narcotics (GC/MS)
0.046 mg/L morphine (004-006)

FINDINGS:

1. Hyperthermia

- a. History that the decedent was in a hot environment without air conditioning, and was witnessed to collapse with seizure activity.
- b. History that the decedent presented to the Emergency Department unresponsive, with a body temperature of 109.4 degrees Fahrenheit.
- c. Hospital course complicated by
 1. hypoxic-ischemic encephalopathy
 2. disseminated intravascular coagulation
 3. shock
 4. multi-system organ failure
- d. Brain swelling
 1. transtentorial herniation
 2. cerebellar tonsillar herniation and acute necrosis
 3. hypoxic-ischemic encephalopathy

2. History of hypertension

- a. Cardiac hypertrophy (heart weight = 550 grams)
- b. History of treatment with hydrochlorothiazide

3. Morbid obesity (Body mass index = 49.5)

4. Contusions of scalp and face

5. Subgaleal hemorrhage

6. No significant injuries

CONCLUSIONS:

Based on the autopsy and the history available to me, it is my opinion that Larry Gene McCollum, a 58-year-old white male, died as the result of hyperthermia. The decedent was in a hot environment without air conditioning, and he may have been further predisposed to developing hyperthermia due to morbid obesity and treatment with a diuretic (hydrochlorothiazide) for hypertension.

MANNER OF DEATH: Accident
